Cleo Unify™

Secure File Sharing With the Control You Need

When business users need to quickly share files or documents, they often turn to non-sanctioned tools that don't meet corporate security and compliance mandates. Although they are not purposely trying to go rogue or be malicious, the potential loss of financial information, HR information, intellectual property, and other sensitive data can be devastating to a company. In some cases, it can result in fines and sanctions if the data breach has regulatory implications.

To stop the epidemic of file security breaches that put your company at risk both financially and legally, IT needs a way to enable users to share files of all sizes — securely and with the appropriate level of governance and control. The solution must allow business users to work collaboratively, both inside and outside their organization, while operating within their security and compliance policies.

Modern Business

The reality of business today is that employees will find a way to share files, with or without IT direction. In order to prevent security breaches, IT must offer secure and simple-to-use alternatives to consumer-oriented offerings.

Gain Control and User Acceptance

With the Cleo Unify solution, you can quickly and easily implement secure file sharing, gain control of information, and eliminate data breaches, while at the same time provide business users with an extremely easy-to-learn, easy-to-use product that increases adoption rates. You also gain additional administrative control over the data and can decide where the storage resides — on premise or in a cloud infrastructure.

Maintain Corporate Standards

Unify teams of professionals collaborating on files both within and beyond your enterprise firewall while maintaining the corporate IT standards needed to protect your data and assure compliance. Your data governance should not have to cease just because the data in question enters a state of team collaboration — whether inside your company or across company boundaries.

Share Any File Type or Size

The Cleo Unify solution allows your teams to collaborate with others — both inside and outside of the company — while exchanging files of all types and sizes securely, easily, and with a complete history that allows you to track all files. It's the best of team collaboration without the security risks associated with consumer-oriented solutions.

Highly Scalable, On-Premise Solution

The Cleo Unify solution scales to meet enterprise-wide requirements and meets your availability needs with fail-safe redundant architecture. Put your company back in control of where your sensitive data resides and who can access it.

Highly Flexible

Built to operate independently or in conjunction with Cleo's proven secure data integration solutions to enable all secure file sharing, secure messaging, and secure managed file transfer operations via a single platform.

Feature/Function	Cleo Unify™
